Mobile broadband is capable of supporting 1-2 light internet users at a time, but it is not yet capable of supporting homes or businesses. For example, streaming and other activities that demand high speed and large amounts of data are not recommended on mobile networks, which often place small data caps on users to limit network congestion.

## ~~Mobile Broadband Internet Providers in the US~~

There are 331 municipal broadband networks in the USA as of May 2020, including a mix of dark fiber networks, Fiber to the Home networks, and business/residential services. We will update this page as we find new networks, mergers, or other changes which impact the number of municipal networks nationwide.

## ~~Municipal Broadband Providers in the US 2020~~

Physical access to broadband is the most important factor in gaining access to the internet. However, broadband is delivered using different technologies, and the type of technology determines the range of speeds delivered to your computer.

Broadband is increasingly intertwined with the daily functions of modern life. It is transforming agriculture, supporting economic development initiatives, and is a critical piece of efforts to improve health care and modernize transportation. But the Federal Communications Commission (FCC) estimates that 21 million Americans still lack broadband access.
