and succeed in math. Jo Boaler—Stanford researcher, professor of math education, and expert on math learning—has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students. There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset' into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. **Mathematical Mindsets: Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals—until now. Mathematical Mindsets provides a proven, practical roadmap to mathematics success for any student at any age.**

This book was written to provide math teachers with supplemental resources they can use in their classrooms. This book can also be used by students to improve their skills. Tutorials are included with many of the activities so you can learn at your own pace. Topics can be used for Alg 1 and 2, as well as Integrated Math I, II, and III. Topics include: order of operations, solving many types of

equations, exponents, mult/divide scientific notation, percentages, distance formula, Pythagorean Theorem, area of triangles from determinants, basic circles, square roots, mean, median, mode, geometric mean, box and whisker plots, matrices (cryptography and inverses), plotting points, graphing circles, lines, and parabolas, long and synthetic division of polynomials, FOIL, Quadratic Formula, logarithms, factoring, and the Binary number system.

From The Author: Has your school added a STEM class, or are you hoping to build more STEM into your school community? Buying a bunch of 3D printers and robot kits is a good start, but what does a sustainable STEM learning culture look like? This book will challenge you to think past the Daily STEM acronym and think about what it means to build a culture of STEM thinking in your school. You'll find plenty of practical tips and examples to make STEM relevant for every kid and infuse it into every classroom and every home in your community. Editorial Reviews: "STEM can seem like such a big challenge for teachers and school leaders alike. We all want students engaged in meaningful, hands-on learning. But where do we begin? Start with Daily STEM. This awesome gift to educators by author Chris Woods is packed full of practical, logical, and easy steps teachers can and should take to bring STEM to life. It's like having Chris right there coaching you, helping you find STEM in everyday life. Daily STEM will have you building a "culture of STEM" in your school or classroom and bringing relevant learning to life." Darrin M Peppard, Ed.D. - Superintendent - Author of Road To Awesome - Renaissance Hall of Fame "Chris' book Daily STEM is exactly what every teacher needs to promote curiosity and hands-on learning in the classroom. He prompts critical thinking and offers experiences that are fun and engaging for students. It is packed full of cool ideas and STEM inspiration-a must read!!!" Jacie Maslyk - Educator - Author - STEM Enthusiast "I absolutely love Daily STEM!! You will never be able to look at the world the same way after you read this gem! Hundreds of ideas

will swirl through your head after each page. If you are searching for your teaching style, here it is: curiosity and connections. This is a book you will read more than once. Chris's personal stories will put a smile on your face as you reflect on your own stories. WOW Factor!! Epic!" Dr. Frank Rudnesky - Educator - Author - Speaker - Consultant "Daily STEM is a book I would normally have an aversion to! Teachers either love the idea of STEM, or they run as fast as they can when they hear the term. I used to run! Daily Stem offered me significant insight into so many ways educators can continue to provide STEM instruction/ideas and exploration across content areas and beyond the classroom walls. The Q and A style made Daily Stem an easy read. It also provided opportunity to revisit a question -and the answer- quite readily. "A noisy classroom is a collaborative classroom. A messy classroom is an inventing classroom," sums up best practice and is a powerful reminder as we plan for the new school year!" Dr. Lori Koerner - K-12 Administrator for Curriculum, Instruction & Professional Personnel
