This book deals with a wide range of techniques used in the urban design process. It is invaluable for architecture, planning, landscape and surveying students and will also help professionals in the day to day practice. A method of urban design is developed which has sustainability and environmental protection at the centre of its philosophy. Previously, literature regarding the urban design method has been almost totally neglected; this book introduces the topic to the reader. A number of techniques are illustrated by example or case study. Where techniques are discussed they are located within the structure of the design process. The book develops a logical framework for a process, which includes problem definition, survey, analysis, concept generation, evaluation and implementation. It is this framework which is presented here as a discourse towards the development of an urban design method. This book is a practical guide, one that the authors themselves would have found useful as students or in the early years of their professional careers. It is organized so that each chapter provides guidance which hitherto, students and practitioners in this field have had to discover for themselves, often with some difficulty, since methods and techniques for urban design is a broad topic thinly spread in published

Digital Twin Driven Smart Design draws on the latest industry practice and research to establish a basis for the implementation of digital twin technology in product design. Coverage of relevant design theory and methodology is followed by detailed discussions of key enabling technologies that are supported by cutting-edge case studies of implementation. This groundbreaking book explores how digital twin technology can bring improvements to different kinds of product design process, including functional, lean and green. Drawing on the work of researchers at the forefront of this technology, this book is the ideal guide for anyone interested in digital manufacturing or computer-aided design.

Historically a dubbing country, Germany is not well-known for subtitled productions. But while dubbing is predominant in Germany, more and more German viewers prefer original and subtitled versions of their favourite shows and films. Conventional subtitling, however, can be seen as a strong intrusion into the original image that can not only disrupt but also destroy the director ' s intended shot composition and focus points. Long eye movements between focus points and subtitles decrease the viewer ' s information intake, and especially German audiences, who are often not used to subtitles, seem to prefer to wait for the next subtitle instead of looking back

up again. Furthermore, not only the placement, but also the overall design of conventional subtitles can disturb the image composition – for instance titles with a weak contrast, inappropriate typeface or irritating colour system. So should it not, despite the translation process, be possible to preserve both image and sound as far as possible? Especially given today 's numerous artistic and technical possibilities and the huge amount of work that goes into the visual aspects of a film, taking into account not only special effects, but also typefaces, opening credits and text-image compositions. A further development of existing subtitling guidelines would not only express respect towards the original film version but also the translator 's work. The presented study shows how integrated titles can increase information intake while maintaining the intended image composition and focus points as well as the aesthetics of the shot compositions. During a three-stage experiment, the specifically for this purpose created integrated titles in the documentary “Joining the Dots” by director Pablo Romero-Fresco were analysed with the help of eye movement data from more than 45 participants. Titles were placed based on the gaze behaviour of English native speakers and then rated by German viewers dependant on a German translation. The results show that a reduction of the distance between intended focus points and titles allow the viewers more time to explore the image and connect the titles to the plot. The integrated titles were rated as more aesthetically pleasing and reading durations were shorter than with conventional subtitles. Based on the analysis of graphic design and filmmaking rules as well as conventional subtitling standards, a first workflow and set of placement strategies for integrated titles were

Taking into account both traditional and emerging modes, this comprehensive new Handbook covers all major methodological and statistical issues in designing and analyzing surveys. With contributions from the world's leading survey methodologists and statisticians, this invaluable new resource provides guidance on collecting survey data and creating meaningful results. Featuring examples from a variety of countries, the book reviews such things as how to deal with sample designs, write survey questions, and collect data on the Internet. A thorough review of the procedures associated with multiple modes of collecting sample survey information and applying that combination of methods that fit the situation best is included. The International Handbook of Survey Methodology opens with the foundations of survey design, ranging from sources of error, to ethical issues. This is followed by a section on design that reviews sampling challenges and tips on writing and testing questions for multiple methods. Part three focuses on data collection, from face-to-face interviews, to Internet and interactive voice response, to special challenges involved in mixing these modes within one survey. Analyzing data from both simple and complex surveys is then explored, as well as procedures for adjusting data. The book concludes with a discussion of maintaining quality. Intended for advanced students and researchers in the behavioral, social, and health sciences, this "must have" resource will appeal to those interested in conducting or using survey data from

anywhere in the world, especially those interested in comparing results across countries. The book also serves as a state-of-the-art text for graduate level courses and seminars on survey methodology. A companion website contains additional readings and examples.

The last decade has brought explosive growth in the technology for manufacturing integrated circuits. Integrated circuits with several hundred thousand transistors are now commonplace. This manufacturing capability, combined with the economic benefits of large electronic systems, is forcing a revolution in the design of these systems and providing a challenge to those people interested in integrated system design. Modern circuits are too complex for an individual to comprehend completely. Managing tremendous complexity and automating the design process have become crucial issues. Two groups are interested in dealing with complexity and in developing algorithms to automate the design process. One group is composed of practitioners in computer-aided design (CAD) who develop computer programs to aid the circuit-design process. The second group is made up of computer scientists and mathematicians who are interested in the design and analysis of efficient combinatorial algorithms. These two groups have developed separate bodies of literature and, until recently, have had relatively little interaction. An obstacle to bringing these two groups together is the lack of books that discuss issues of importance to both groups in the same context. There are many instances when a familiarity with the literature of the other group would be beneficial. Some

practitioners could use known theoretical results to improve their "cut and try" heuristics. In other cases, theoreticians have published impractical or highly abstracted toy formulations, thinking that the latter are important for circuit layout.

"Based on five years of research into how great companies make strong marketing strategies, this book is written for practitioners to highlight why marketing planning falls and what can be done about it. Making Marketing Happen is an essential text for marketers who already know what the traditional text books say but need to make it work in the real world."--BOOK JACKET.

This book details the basic concepts and the design rules included in Eurocode 3 "Design of steel structures" Part 1-8 "Design of joints". Joints in composite construction are also addressed through references to Eurocode 4 "Design of composite steel and concrete structures" Part 1-1 "General rules and rules for buildings". Moreover, the relevant UK National Annexes are also taken into account. Attention has to be duly paid to the joints when designing a steel or composite structure, in terms of the global safety of the construction, and also in terms of the overall cost, including fabrication, transportation and erection. Therefore, in this book, the design of the joints themselves is widely detailed, and aspects of selection of joint configuration and integration of the joints into the analysis and the design process of the whole construction are also fully covered. Connections using mechanical fasteners, welded connections, simple joints, moment-resisting joints and

lattice girder joints are considered. Various joint configurations are treated, including beam-to-column, beam-to-beam, column bases, and beam and column splice configurations, under different loading situations (axial forces, shear forces, bending moments and their combinations). The book also briefly summarises the available knowledge relating to the application of the Eurocode rules to joints under fire, fatigue, earthquake, etc., and also to joints in a structure subjected to exceptional loadings, where the risk of progressive collapse has to be mitigated. Finally, there are some worked examples, plus references to already published examples and to design tools, which will provide practical help to practitioners.

The Second Middle East Edition blends theory with contemporary management practice. Dr. Marina Apaydin (American University of Beirut) joins the authoring team in this edition for significant enhancements to content and presentation of topics. New chapter-opening cases have been added to feature companies and management personalities from the Middle East. Management Insights vignettes offer balanced representation of international as well as local, small-to-medium sized companies and start-ups, to ensure applicability of theory in a variety of contexts. Updated content and improved topics coverage ensure closer alignment with introductory management courses:

- Two new topics have been added on the history of management in the Arab world in Chapter 2, and Islamic ethics in Chapter 5.
- Improved content coverage includes a new Chapter 3 focusing on the Manager as a Person.
- Improved and streamlined coverage of managerial processes relating
