This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

World Trade Resources Guide brings together in one easy-to-use source a wide range of resource information for anyone interested in import/export opportunities around the world.

Basic facts are given for each country, such as economic and trade statistics, principal commodities imported and exported, and major trading partners. Also for each country, foreign trade contacts and sources are given, including organizations and agencies—banks, chambers of commerce, research centers, trade associations; publications and information resources—business libraries, databases, consultants, statistical sources; transportation and shipping—air cargo carriers, airports, courier services, free trade zones, freight forwarders, ports, shipping lines and agents.
