beginning of your own consulting business you will encounter an important challenge: how to build a system of communication with the client. The Consultant's Code will help separate you from all of the other consultants by showing you how to properly develop and use the four pillars of success. The four pillars are intelligence, effort, likeability and intent. Each pillar is discussed in detail and shows how common misconceptions that have been taught or believed has been holding consultants back. These misconceptions and inaccurate beliefs not only affect the consultants they negatively affect clients. Understanding that intelligence can be developed as well as knowing the different types of intelligence, consultants can use their natural skills to improve their careers. Also being aware of the different types of intelligence a consultant can identify deficiencies that may be holding them back, develop those capabilities and use it to be more efficient and effective. This awareness also improves relationships as we better understand other capabilities and how those skills are required to have an

effective team. Effort is required for anyone to be successful, however many people are taught to work hard rather than put in focused effort. Also consultants are taught to put in billable hours regardless if these hours are focused and efficient. Focused effort allows a consultant to be more efficient in their learning, consulting hours and other activities. Living a full life is based in having focused and concerted effort in what we do each day. Likeability may be the most forgotten of all of the pillars by most consultants. Consultants are commonly taught to develop technical skills believing that all clients want are technical results. However the issues clients face are human based issues. The solutions may be technical as well as other forms of solutions, but the problems always affect a human being. Therefore likeability is critical for the success of a consultant. The Consultant's Code discusses methods of developing likeability as well as ways that likeability can be eroded through thoughtless activities that commonly occur on many client engagements. The final pillar is Intent. Intent is the act of having a purpose to what you are doing and having the tenacity and persistence to battle through the difficult hurdles. Due to the nature of temporary engagements consultants can often get away with little to no intent as their client relationships will come to and end. This is inaccurate thinking and can lead to lost profits and many strained relationships. Using intent will improve a consultants career and their relationships which can result in higher earnings, more gratifying, rewarding and challenging opportunities. The Consultant's Code discusses what consultants can do to develop more intent and have a more fulfilling career.

lies at the heart of what consulting is all about. Consultants solve problems created by the powerful forces of change in an organization's environment and in so doing, create change themselves. The Practice of Professional Consulting is a comprehensive examination of what has been called "the world's newest profession." In this practical resource Edward Verlander offers an overview of the industry and includes the most useful processes, tools, and skills used by successful consultants to produce solutions for their clients. The book also reveals why consulting is a growing and attractive career option. The best practices used by leading consulting firms are included in the book as well as the capabilities skillful consultant use in each stage of engagement. Verlander also recommends ways to ensure a consultant can solve a client's problems in a systematic, professional way. At the very heart of the book is the emphasis he puts on what is needed to become a truly trusted consultant. Filled with a wealth of must-have information from a wide range of consulting professionals, the book includes: a model of the consulting cycle; a diagnostic instrument for assessing consulting roles; ideas of how to develop political intelligence to navigate client organizations; tools for managing consulting meetings, risk assessment, and skills transfer; techniques in communications, emotional intelligence, presentations, and listening; and much more. Written for anyone wishing to start a consulting business, new employees at established consulting firms, facilitators of consulting training programs, and faculty at business schools, this important resource provides an easy way to understand the stages, roles, and tasks of consulting found in any type of consulting and it provides simple and easy-to-use techniques and templates for implementation.
